                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC related microorganisms e.g. algae, archaea, bacteria, fungi and comparables, for universal detection and for specific and ubiquitous contection and identification of an algal, archaeal, bacterial, fungal and corporatives genus, family and group. A nucleic acid (I) obtained content of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of streptococcus pneumoniae. (I) can be content of content of streptococcus pneumoniae. (I) can be content of detection and for identification of Streptococcus pneumoniae. (I) can be content of design a therapeutic agent which is effective against content of microorganisms. Microbial species or genus or family or phylum or group content of the detection sp., Enterobacteriaceae group, Streptococcus sp., Neisseria converted in the converted and Staphylococcus sp. Using DNA based tests provides faster converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests as results can be determined in converses than substrate specificity tests.
                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and/or primers are version.

acids of determined algal, archaeal, bacterial, rungar and primer pairs. The method can species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting fungiants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for generating a repettory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bergeron N

cc species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more cc related microorganisms e.g. algae, archaea, bacteria, fungi and cetection and identification of an algae, archaea, bacteria, fungi and cc parasites, for universal detection and for specific and ubiquitous cd etection and identification of an algal, archaeal, bacterial, fungal and comparasite in a sample and for the universal detection cf any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin cc detection and for identification of streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against cused to design a therapeutic agent which is effective against complete and be detection be cused to design a therapeutic agent which is effective against cc which can be detected include Abiotrophia adiacens, Bordetella sp., cc wycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria comportioeae and staphylococcus sp. Using DNA based tests provides faster cresults than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 crepresent nucleotide sequences and primers/probes which are given in the
                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-245006/25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-SEP-1999; 99CA-02283458

                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                 ş
                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic concids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be considered microorganisms e.g. algae, archaea, bacteria, fungia and parasitical grassites, for universal detection and for specific and ubiquitous concentration and identification of an algal, archaeal, bacterial, fungal and grassitical species, genus, family and group. A nuclaic acid (1) obtained concentration and interest for detection of any bacterial, fungal and concentration of any bacterial, fungal and grassitical species, genus, family and group. A nuclaic acid (1) obtained concentration, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial sgent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous concentration and for identification of streptcococcus pneumoniae. (1) can be used to design a therapeutic agent which is effective against concentration of include Abiotrophia adiacens, Bordetella sp., complete than substrate specificity tests as results can be determined in the createst substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 creates and primers/probes which are given in the
                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 27; Page 998; 1580pp; English.

Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.

Page 1000; 1580pp; English

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes cand/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical consected microorganisms e.g. algae, archaea, bacterial, fungal and parasitical consected microorganisms e.g. algae, archaea, bacterial, fungal and can be related microorganisms e.g. algae, archaea, bacterial, fungal and can be detection and identification of an algal, archaeal, bacterial, fungal and comparasitical species, genus, family and group. A nucleic acid (I) obtained comparasitical species, genus, family and group. A nucleic acid (I) obtained comparasitical species, genus, family and group. A nucleic acid (I) obtained comparasitical agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous of any bacterium, fungus or parasite in a sample and for the detection of detection and for identification of streptococcus pneumoniae. (I) can be used to design a therapeutic agent resistance gene or at least one toxin comparasity. Pseudomonads group, Escherichia coli, which can be detected include Abiotrophia adiacens, Bordeteila sp., (C corynebacteriaceae family, Pseudomonads group, Escherichia coli, which can be detected include Abiotrophia adiacens, Bordeteila sp., (Pseudomonads group, Escherichia coli, Pseudomonads group, Escherichia coli, can be determined in an also achieved. AAH002304 crepresent nucleotide sequences and primers/probes which are given in the exemplification of the present invention

Best Matches Query Match related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexa nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpb and/or recA genes from which probes and/or primers are derived. The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasitical species, genus, family and group. A nucleic acid (I) obtained CC quartical to genus, family and group. A nucleic acid (I) obtained CC quartical the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin CC at least one antimicrobial agent resistance gene or at least one toxin CC quartical acid include abiotrophia adiacens, bacterive against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., CC crynebacterium sp., Enterobacteriaceae group, Escherichia coli Mycobacteriaceae family, Pseudomonade group, Streptococcus sp., Neisseria CC an hour and taphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in the contract of the semences and orients/probe which are civen in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                   CC species with a combination of defined primers pairs. The method can be considered microorganisms e.g. algae, archaea, bacteria, fungi and combination for universal detection and for specific and ubiquitous content of the inversal detection and for specific and ubiquitous content of the inversal detection and group. A nucleic acid (I) obtained consists of the invention can be used for the universal detection of an algal, archaeal, bacterial, fungal and content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium, fungus or parasite in a sample and for the detection of content of any bacterium of the specific and ubiquitous content of any bacterium and for identification of Streptococcus spreamoniae. (I) can be used to design a therapeutic agent which is effective against confidence of any bacterium sp., Enterobacteriaceae group, Escherichia coli, con be confident of the proposed course of the specific and ubiquitous courses. (I) can be confident of the proposed course sp., Neisseria confidence and Staphylococcus sp., Neisseria confidence and Staphylococcus sp., Using DNA based tests provides faster confidence and improved accuracy is also achieved. AAH00010 to AAH002304 confidence and course of the proposed course which are given in the combination of the course of the proposed course of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bergeron M

The method comprises amplifying the nuclei acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial; v

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            묽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
   related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexh nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    microorganism; diagnosis; translation elongation factor Tu; toxi translation elongation factor G, RecA recombinase; resistance; catalytic subunit of profon-franchionaria-
                                                                                                                                                                                                                                      The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-SEP-1999; 99CA-02283458.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     នន្តន្តន្តន្ត្
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                          comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomycin-resistant enterococci in a biological sample, e.g. stool samples, anal or perirectal swabs, blood and body fluids from an individual. The method replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an
                                                                                                                                                                                                   The invention relates to detecting the presence or absence of vancomycin-
resistant enterococci (VRE) in a sample, comprising performing a cycling
step by amplifying a sample with pair of vanA or vanB primers and
hybridising the sample with a pair of vanA or vanB probes, labelled with
donor and acceptor fluorescent group, respectively, detecting
fluorescence resonance energy transfer (FRET), where the presence of FRET
indicates presence of VRE. Also included is an article of manufacture,
respectively.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gonorrhoese and Staphylococcus sp. . Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 15
                      oligonuclectide comprising sequences substantially corresponding to nuclectides 387-404, 406-423 or 426-446 of the vanB gene, or its complement or portion, where the oligonuclectide hybridizes under stringent hybridization conditions to vanh or vanB DNA; and (2) a kit comprising one or more oligonuclectide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonuclectide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products an equiring microbiological control. The present sequence represents an Enterococcus faecium vanA nucleotide sequence from the present invention.
                                                                                                                                                                                                                                                                  oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an
                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide probe or primer, and detecting or determining the presence or amount of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             e.g. identifying vancomycin-resistant.enterococcus, com and/or vanB-specific oligonucleotide probes or primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2005-222218/23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA detection; antibiotic-resistance; vancomycin; vanA; gene; ds

Method for the detection of bacterial species using probes and primers allows detection and quantification of antibiotic resistant bacteria in patients, the environment and

Claim 94; Page 145-147; 216pp; English.

CC sample. The method of the invention comprises using probes and/or comprises. The method of the invention comprises using probes and/or amplification primers which are specific, ubiquitous and sensitive for comprises and the presence and/or amount of nucleic acids from selected bacterial species in any sample, where the bacterial nucleic acid comprises a selected target region hybridisable with the probes or comprises. The method comprises contacting the sample with the probes or comprises and detecting the presence and/or amount of hybridised primers or complification products as and indication of the presence and/or amount of the bacterial species. This method may be used to detect commonly concuntered bacterial pathogens, e.g. Escherichia coli, Klebsiella compensoriae, Pseudomonas aeruginosa, Proteus mirabilis, Streptococcus preumoniae, Staphylococcus aureus, Staphylococcus epidermidis, compresence, Haemophilus influenzae and Moraxella catarrahais. These bacterial species are associated with approx. 90% of urinary tract conculting septicaemia, meningitis, pneumonia, intra-abdominal infections, and other severe respiratory tract infections. The method control also be used to evaluate a bacterial resistance to beta-lactam The sequences given in AAT28560-76 represent fragments derived is bacterial antibiotic resistance genes which were used as probes method of the invention for the detection of bacterial species is may also be used antibiotics in a ín the

                                                                                  The invention relates to detecting target bacterial species suspected to be present in a sample, comprising contacting nucleic acids of target bacterial species with an amplification primer pair derived from a context of the target bacterial DNA fragment (ABA76825-ABA76861) specific for the target bacterial species but ubiquitous for different strains, amplifying the currents are indication of the presence or amount of an amplified context of the target bacterial species. The invention includes primers and probes (ABA76862-CC ABA76894) against the target bacterial species, especially E.coli, CC E.pneumoniae, P.acruginosa, P.mirabilis, S.pneumoniae, S.aureus, CC S.epidermidis, E.faecalis, S.saprophyticus, S.pyogenes, H.influenzae, C. M.catarrhalis and/or group A Streptococci producing exotoxin A gene species. A, suspected to be present in a sample which is obtained from human cc patients, animals, environment or food, and which consists of one or more bacterial colonies. Oligonucleotide probes and primers complementary to the bacterial genes encoding resistance to antibiotics such as bla (tem), bla(shv), aadB, sacCl, sacCl, sacCl, sacA4, mecA, vanA, vanH, covanX, satA, sacA-aphb, vat, vas, msrA, sul and/or int (ABA75985-ABA77001) care also useful to identify commonly encountered and clinically important resistance genes. The invention provides a rapid method of bacterial colentification that can be achieved, which reduces the time currently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               र्
                                       which can be detected include ALAURIUM, Escherichia coli, Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Wycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. . Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the
                                                                                                                                                                                                                                                                                                          detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hava nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and/or primers and loss primer pairs. The method can species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
The invention relates to methods of reducing vancomycin resistance in a CC vancomycin-resistant organism. One method involves introducing a CC vancomycin resistant organism. One method involves introducing a CC vancomycin resistance gene antisense nucleic acid into the organism; CC antisense oligonucleotides complementary to AAF76023-AAF76031 are CC particularly preferred for this purpose. The second method involves CC providing additional vanH promoter sequences which are not operatively CC coupled to a vancomycin resistance gene, so that the phosphorylated vanR CC gene product (which induces vanH promoter activity) is competitively CC sequestered. Both methods are able to restore antibiotic susceptibility CC in glycopeptide resistant enterococci. The methods of the invention are CC useful for reducing vancomycin resistance in a vancomycin resistant cC organism, particularly Enterococcus faecium and Enterococcus sp. and Streptococcus sp., to which Enterococcus faecium and Enterococcus sp. and CC faecalis have the potential to transfer resistance determinants. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is a transposon sequence. The transposon comprises the genes necessary for expression of resistance to glycopeptides in Enterococcus faccium. It also contains genes associated with resistance, e.g. involved in regulation of expression of the resistance genes or in the amount of polypeptides produced. See also AAQ25179-Q25183.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           colonised gastrointestinal or genitourinary tracts of animals, including humans; and in primary or adjuvant therapy for vancomycin-resistant enterococcal infections. The gene based strategy targets key vancomycin resistance determinants and results in restoration of vancomycin susceptibility in previously glycopeptide- resistant enterococci. The present sequence represents the Enterococcus faecium Vana gene cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               significant pathogens, and may be used for the ex vivo eradication of vancomycin-resistant enterococci from frequently colonised settings, such as intensive care units, heamodialysis units, and chronic care facilities, for the in vivo clearance of vancomycin- resistant enterococci from
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of societies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                colonisation by vancomy significant pathogens,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC the gene product or that has an activity against a biological pathway contentifying a gene required for cellular proliferation; (8) contentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture compound that inhibits the extent to which each of the strains is present in a culture or collection of continuous collection of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous mucleic acids required for cellular proliferation to isolate candidate molecules for rational cury discovery programs, or for screening homologous nucleic acids required continuous continuous. The present sequence is one of the target corporatyotic essential genes. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                        밁

                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                 RESULT 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to detecting the presence or absence of vancomycin-
resistant enterococci (VRE) in a sample, comprising performing a cycling
step by amplifying a sample with pair of vanA or vanB primers and
hybridising the sample with a pair of vanA or vanB primers and
thou donor and acceptor fluorescent group, respectively, detecting
fluorescence resonance energy transfer (FRET), where the presence of FRET
indicates presence of VRE Also included is an article of manufacture,
comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes
and a donor fluorescent group and a corresponding fluorescent group. The
method is useful for detecting the presence or absence of vanA or
resistant enterococci in a biological sample, e.g. stool samples, anal or
perirectal swabs, blood and body fluids from an individual. The method
creplaces standard culture methods and reduces the cost. The method
creplaces rapid vancomycin resistant enterococcus real time pCR assay
which is useful for beginning the antimicrobial therapy immediately to
treat hospital acquired infection. The presence can

cc resistant enterococci (VRE) in a sample, comprising performing a cycling c step by amplifying a sample with pair of vanA or vanB primers and cc hybridising the sample with a pair of vanA or vanB primers and cc hybridising the sample with a pair of vanA or vanB probes, labelled with c donor and acceptor fluorescent group, respectively, detecting c indicates presence of VRE. Also included is an article of manufacture, c comprising a pair of vanA or vanB probes c and a donor fluorescent group and a corresponding fluorescent group. The c method is useful for detecting the presence or absence of vanComycin-cc resistant enterococci in a biological sample, e.g. stool samples, anal or c method is useful for detecting the presence or absence of vanComycin-cc replaces standard culture methods and reduces the cost. The method creplaces standard culture methods and reduces the cost. The method crowides rapid vancomycin resistant enterococcus real time PCR assay c which is useful for beginning the antimicrobial therapy immediately to c treat hospital acquired infection. The present sequence is an content of the present sequence is an enterococcal vanB, vancomycin resistance gene.

The invention relates to detecting the presence or absence of vancomycin-resistant enterococci (VRE) in a sample, comprising performing a cycling

Disclosure; SEQ ID NO 15; 23pp; English.

Detecting presence or absence of vancomycin-resistant enterococci in biological sample from individual comprises using real time polymerase

                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 556 BP; 130 A; 154 C; 117 G; 155 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       method is useful for detecting the presence or absence of vancomycin-
resistant enterococci in a biological sample, e.g. stool samples, anal
perirectal swabs, blood and body fluids from an individual. The method
replaces standard culture methods and reduces the cost. The method
provides rapid vancomycin resistant enterococcus real time PCR assay
which is useful for beginning the antimicrobial therapy immediately to
treat hospital acquired infection. The present sequence is an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transfer; FRET
```

The invention relates to detecting the presence or absence of vancomycin-resistant enterococci (VRE) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanA or vanB primers and hybridising the sample with a pair of vanA or vanB probes, labelled with

Detecting presence or absence of vancomycin-resistant enterococci in biological sample from individual comprises using real time polymeras

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET indicates presence of VRE. Also included is an article of manufacture, comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomycin-resistant enterococci in a biological sample, e.g. stool samples, anal or perirectal swabs, blood and body fluids from an individual. The method replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an
The invention relates to detecting the presence or absence of vancomycin-resistant enterococci (VRE) in a sample, comprising performing a cycling step by amplifying a sample with pair of vanA or vanB probes, labelled with donor and acceptor fluorescent group, respectively, detecting fluorescence resonance energy transfer (FRET), where the presence of FRET indicates presence of VRE. Also included is an article of manufacture, comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes and a donor fluorescent group and a corresponding fluorescent group. The method is useful for detecting the presence or absence of vancomycin-resistant enterococci in a biological sample, e.g. stool samples, anal or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gene; ds; non

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            អន្តិ និង្សា និង្សា
                            The invention relates to detecting the presence or absence of vancomycin-
CC resistant enterococci (VRE) in a sample, comprising performing a cycling
CC step by amplifying a sample with pair of vanA or vanB primers and
CC hybridising the sample with a pair of vanA or vanB primers and
CC donor and acceptor fluorescent group, respectively, detecting
CC fluorescence resonance energy transfer (FRET), where the presence of FRET
CC comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes
CC comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes
CC and a donor fluorescent group and a corresponding fluorescent group. The
CC method is useful for detecting the presence or absence of vancomycin-
CC resistant enterococci in a biological sample, e.g. stool samples, anal or
CC perirectal swabs, blood and body fluids from an individual. The method
CC replaces standard culture methods and reduces the cost. The method
CC provides rapid vancomycin resistant enterococcus real time PCR assay
CC which is useful for beginning the antimicrobial therapy immediately to
CC treat hospital acquired infection. The present sequence is an
CC enterococcal vanB, vancomycin resistance gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The method replaces standard culture methods and reduces the cost. The method provides rapid vancomycin resistant enterococcus real time PCR assay which is useful for beginning the antimicrobial therapy immediately to treat hospital acquired infection. The present sequence is an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 556 BP; 134 A; 158 C; 117 G; 147 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting presence or absence of vancomycin-resistant enterococci in biological sample from individual comprises using real time polymerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2004-268785/25.

                                                                                                                                                                                                                                       The invention relates to detecting the presence or absence of vancomycin-
resistant enterococci (VRB) in a sample, comprising performing a cycling
step by amplifying a sample with pair of vanA or vanB primers and
hybridising the sample with a pair of vanA or vanB probes, labelled with
donor and acceptor fluorescent group, respectively, detecting
fluorescence resonance energy transfer (FRET), where the presence of FRET
indicates presence of VRE. Also included is an article of manufacture,
comprising a pair of vanA or vanB primers, a pair of vanA or vanB probes
and a donor fluorescent group and a corresponding fluorescent group. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25-SEP-2002; 2002US-00254260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADO47259 standard;
                                                                                                                                 method is useful for detecting the presence or absence of vancomycin-
resistant enterococci in a biological sample, e.g. stool samples, ana.
perirectal swabs, blood and body fluids from an individual. The method
replaces standard culture methods and reduces the cost. The method
provides rapid vancomycin resistant enterococcus real time PCR assay
which is useful for beginning the antimicrobial therapy immediately to
treat hospital acquired infection. The present sequence is an

                                                                                                                                                                                                                                                   The protein encoded by the vanB gene is implicated in resistance of Grapositive bacteria to glycopeptides, particularly to vancomycin. This resistance is inducible by Vancomycin but not by telcoplanin. Sequence AAQ69230 is a claimed internal fragment of the vanB gene. (Updated on 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for detecting vancomycin resistance (C) gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide (C) probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an (2) oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or (2) sequences substantially corresponding to nucleotides 870-896, 851-868 or (2) oligonucleotide sagnature or portion, or an (2) oligonucleotide sagnature or portion, or an (2) oligonucleotide sagnature or portion, where the oligonucleotide hybridizes under (2) complement or portion, where the oligonucleotide hybridizes under (2) at the present hybridization conditions to vanA or vanB DNA; and (2) a kit (2) comprising one or more oligonucleotide(8) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned (2) above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). (2) They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products are the present an Errococcus faecalis vanB nucleotide sequence from the present an expersion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                 श्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and garasitical species, for universal detection and for specific and ubiquitous cd detection and identification of an algal, archaeal, bacterial, fungal and comparasitical species, genus, family and group. A nucleic acid (I) obtained cc using the method of the invention can be used for the universal detection of any bacterium, fungus or parasitie in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin comparasity of the specific and ubiquitous detection and for identification of streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against cused to design a therapeutic agent which is effective against complete comparatisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., comprebacteriaceae family, Pseudomonads group, Escherichia coli, wycobacteriaceae family, Pseudomonads group, Escherichia coli, con hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the camplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal bacterial, fungal and parasitical species in a test sample.

                                                                                                                                                                                                                                                                                                                  АДУ59940/с
                                                                                   RESULT 37
                                                                                                                                                                                                                                                                                                                                                 oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an concleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its complement profition, where the oligonucleotide hybridizes under comprising one or more oligonucleotide (s) specific for a vanA gene and/or stringent hybridization conditions to vanA or vanB DNA; and (2) a kit comprising one or more oligonucleotide(s) specific for a vanA gene and/or vanB gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying artibiotic resistance genes (e.g. vancomycin resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products or requiring microbiological control. The present sequence represents an Enterococcus faecium vanB nucleotide sequence from the present invention.

The method and kit are useful for detecting and/or amplifying genes (i.e. vanA and/or vanB genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products an orequiring microbiological control. The present sequence represents an enterococcus and products or other products and products or other products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an oligonucleotide composition comprising a first oligonucleotide composition sequences substantially corresponding to nucleotides 870-896, 851-868 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for e.g. identifying vancomycin-resistant enterococcus, comprises using vanA-and/or vanB-specific oligonucleotide probes or primers.
                                                                                                                                                                                                                               Enterococcus faecalis. Synthetic.

and/or vanB-specific oligonucleotide probes Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for identifying vancomycin-resistant enterococcus, comprises using vanAor primers.

Example 1; SEQ ID NO 17; 33pp; English.

probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an oligonucleotide composition comprising a first oligonucleotide composition comprising a first oligonucleotide comprising sequences substantially corresponding to nucleotides 870-896, 851-868 or oligonucleotide comprising sequences substantially corresponding to oligonucleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vans gene, or its complement or portion, where the oligonucleotide hybridizes under the ringent hybridization conditions to vans DNA; and (2) a kit comprising one or more oligonucleotide(8) specific for a vans gene and/or vans gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products requiring microbiological control. The present sequence represents a consensus vans nucleotide sequence from the present invention. The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonuclectide contacting the sample with a vanA- and/or vanB-specific oligonuclectide contacting the presence or amount of

WPI; 2005-222218/23.

Detecting vanA and/or vanB nucleic acid molecules in a sample, useful for e.g. identifying vancomycin-resistant enterococcus, comprises using vanA-and/or vanB-specific oligonucleotide probes or primers.

Example 1; SEQ ID NO 10; 33pp; English.

The invention relates to a method for detecting vancomycin resistance gene vanA and/or vanB nucleic acid molecules in a sample comprising contacting the sample with a vanA- and/or vanB-specific oligonucleotide

complement or portion, where the oligonucleotide hybridizes under stringent hybridization conditions to vanh or vanh DNA; and (2) a kit comprising one or more oligonucleotide(s) specific for a vanh gene and/or vanh gene in a test sample, comprising the oligonucleotide mentioned above. The method and kit are useful for detecting and/or amplifying genes (i.e. vanh and/or vanh genes) in a test sample, or for identifying antibiotic resistance genes (e.g. vancomycin-resistant enterococcus). They may also be used in other industrial purposes, such as for quality control of food, water, pharmaceutical products or other products control of food, water, pharmaceutical products or other products an Enterococcus faecium vanh nucleotide sequence from the present invention. probe or primer, and detecting or determining the presence or amount of hybrid formation or amplified nucleic acid. Also described: (1) an oligonucleotide composition comprising a first oligonucleotide comprisis sequences substantially corresponding to nucleotides 870-896, 851-868 or 898-917 of the vanA gene, or its complement or portion, or an 898-917 of the vanA gene, or its complement or portion, or an oligonucleotide comprising sequences substantially corresponding to nucleotides 387-404, 406-423 or 426-446 of the vanB gene, or its e comprising 851-868 or

Bergeron,M.G., Picard,F.J., Ouellette,M. and Roy,P.H.

Species-specific and universal DNA probes and amplification primers

to rapidly detect and identify common bacterial pathogens and

associated antibiotic resistance genes from clinical specimens for

routine diagnosis in microbiology laboratories

routine diagnosis in microbiology laboratories

Patent: US 5994066-A 170 30-NOV-1999;
